

MURALI PRASANTH

Software Engineer II

+91 90254 65713 | muraliprasanth706@gmail.com | Bangalore, India | [LeetCode](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Software Engineer with 3.6+ years of experience building scalable SaaS and AI-powered applications using React, Node.js, Python, and FastAPI. Experienced in frontend architecture, backend API design, authentication systems, Redis caching, and performance optimization. Passionate about solving real-world problems through clean architecture and modern software engineering practices.

WORK EXPERIENCE

Software Engineer II

In Cresco Technology

Mar 2026 – Present

On-site · Coimbatore

APEX (NP 360)

- Designed and implemented Role-Based Access Control (RBAC) for expert and quote management, ensuring secure data access across multiple organizations in a multi-tenant environment.
- Introduced a restricted External Organization Editor role with defined permissions, enabling controlled approval workflows and preventing unauthorized publishing and administrative actions.
- Developed and enhanced expert and quote management APIs, implementing new business workflows that improved backend service maintainability and scalability.
- Implemented Redis caching for frequently accessed expert and quote data, reducing database load and enabling faster retrieval.

Candidate Extraction API (AI-Powered Document Processing Platform – GUS)

- Designed and developed an AI-powered document processing platform using FastAPI to automate structured data extraction from resumes, identity documents, educational certificates, payslips, and bank statements.
- Built a modular multi-agent extraction pipeline with specialized AI agents per document type, using asynchronous processing to improve throughput and reduce processing time.
- Implemented intelligent document preprocessing with OpenCV — automatic deskewing, orientation correction, PDF page segmentation, and document classification — to enhance extraction accuracy.
- Developed secure REST APIs with API key authentication, SMB file-share integration, and post-processing pipelines for data validation, normalization, deduplication, and source mapping.

Tech Stack: React, Node.js, Next.js, Python

Software Engineer

OneBill Software India Pvt Ltd

Feb 2023 – Mar 2026

On-site · Bangalore

Pricing Studio (Core Billing Software Module)

- Migrated core billing modules — Products, Taxes, Bundles, Discounts, Policies, and Partners — from GWT to React, enhancing maintainability, scalability, and developer productivity.
- Designed and developed reusable React components using Context API and custom hooks, reducing code duplication and accelerating feature development.
- Modernized legacy Products and Promotions APIs by converting to RESTful services, redesigning request/response contracts, and improving API consistency.
- Optimized application performance with React.lazy, code splitting, and memoization, achieving a 30% reduction in bundle size and improved TTI across 1,000+ real-world use cases.

Self-Care & Shopping Cart WebApp (Online Subscription Platform)

- Implemented a Node.js Backend-for-Frontend (BFF) layer to centralize authentication and API orchestration between the React UI and backend Java services.
- Unified multiple authentication mechanisms (access token and session-based) behind a single abstraction layer for secure, simplified frontend integration.
- Modernized the authentication architecture by migrating legacy flows to JWT-based authentication with secure token validation and refresh token handling.
- Migrated authentication flows from Angular to React (v16 to v18), exposing secure BFF endpoints and enhancing reliability and developer experience.

Service Desk Application (React Native – Android, iOS & Web)

- Architected a cross-platform React Native application for Android, iOS, and Web from a shared codebase, implementing secure REST API integrations, authentication, and TanStack Query for data fetching, caching, and offline sync.
- Designed a flexible backend tagging system and advanced ticket management features, including priority management and dynamic tagging, improving categorization and team collaboration.
- Integrated the Service Desk platform with the Self-Care application, enabling users to view, track, and manage open support tickets from a single interface.
- Optimized performance through API optimization, React Native enhancements, and Redis caching for frequently accessed ticket searches, improving response times by ~10–15%.

Tech Stack: React, Node.js, Jest, ES6+, React Native

PROJECTS

Smart Healthcare Appointment System - [Git](#)

Tech Stack: React, React Native, Node.js, PostgreSQL

- Built a doctor dashboard and patient mobile app to reduce waiting time after appointment booking.
- Implemented real-time appointment queue tracking with estimated consultation time.
- Designed and developed the complete MVP within 3 days using AI-assisted development.
- Reduced patient uncertainty by providing live queue visibility and appointment status.

SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, Python, FastAPI, Java, gRPC, Queues

Databases & Caching: PostgreSQL, MongoDB, Redis

Architecture: Micro Frontend, Modular Design, Microservices

DevOps & Tools: Git, GitHub, Docker, Linux, NGINX, Postman, Jira

Soft Skills: Teamwork, Problem Solving, Time Management, Collaboration

EDUCATION

Bachelor of Technology (Information Technology)

Government College of Technology, Coimbatore

2020 – 2023

CGPA: 7.9
